# Natakhtari Stands

Shape and lighting

# Shape and lighting

This presentation features the new shapes, details and lighting concept for Natakhtari beer stands. We've integrated the copper brewing tanks into every stand and therefore, created the whole new visual experience - showing the brewing process.

The design is refine and the same time closer to the quality beer concept. The copper tubes and tanks make stands look outstanding and attractive. The stands also feature the shelves for beer bottles or other accessories.

Please take in consideration, that the following renders don't show the colors or the textures. These two important steps should be chosen depending on the new visual identity of Natakhtari. The new corporate colors and visual style is very important for the stands' color scheme and textures, so this will be discussed on the next step of our collaboration. This presentation is for the shapes, details and lighting. However, we've made the significant color difference to make the shapes more clear.
